## **Introduction**

This project seeks to provide NHS Boards and Health and Social Care Partnerships with nationally comparable measures of inequalities relating to health and social care service provision. These measures will enable comparison within areas over time by estimating absolute and relative inequality gradients, alongside overall trends, for key system-wide indicators of access, quality and outcome.

## **Aim**

The aim of this study was to develop public health intelligence systems for measuring inequalities relating to health and social care service access, quality and outcomes across Scotland.

## **Objectives**

- Scope and develop systems for collation and analysis of relevant data.
- Measure inequalities in access to health and social care services, quality of care and treatment received, and health and social care service outcomes by area-based deprivation classification.
- Inform NHS Health Scotland's programmes of work regarding the contribution of NHSScotland and Health and Social Care Partnerships in reducing health inequalities and public service reform.

## **Report overview**

This report provides technical specifications for the indicators in the current set.

# Indicator specifications

## Indicator 1 – Patients per general practitioner

<b>Indicator name</b>	<b>Patients per general practitioner (GP)</b>
<b>Indicator definition</b>	The number of patients per GP headcount, excluding registrars and retainers. It is adjusted for age, sex and deprivation quintile using the General Medical Services (GMS) workload adjustment model developed by Deloitte for the Scottish Government's Scottish Allocation Formula Review (see <b>Appendix 1</b> )
<b>Domain</b>	Access
<b>Rationale for indicator</b>	Increased primary care supply is a key measure of access to health and social care systems
<b>Indicator type</b>	Age, sex and neighbourhood ill health adjusted ratio
<b>Measure</b>	Number of patients per GP headcount, excluding registrars and retainers. It is adjusted for age, sex and deprivation quintile using the GMS workload adjustment model
<b>Year type</b>	Snapshot – 30 September
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by Scottish Index of Multiple Deprivation (SIMD) 2004 quintile (Scottish population weighted)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	None applied to this indicator
<b>Numerator definition</b>	Practice population estimated on an annual basis, using 30 September as a reference point
<b>Data source</b>	Information Services Division (ISD) – GP Workforce and Practice Populations
<b>Minimum geography</b>	Practice-attributed deprivation quintile
<b>Age bands</b>	Five-year age bands from 0–4 to 90+ years
<b>Gender</b>	Male and female
<b>Years</b>	2002/03–2014/15

<b>Indicator name</b>	<b>Patients per general practitioner (GP)</b>
<b>ICD-10 codes</b>	n/a
<b>Denominator definition</b>	Number of GPs (headcount) excluding registrars and retainers at the mid-point of the current financial year attributed to each small area
<b>Data source</b>	ISD – GP Workforce and Practice Populations
<b>Minimum geography</b>	Practice-attributed deprivation quintile
<b>Age bands</b>	n/a
<b>Gender</b>	n/a
<b>Years</b>	2002/03–2014/15
<b>ICD-10 codes</b>	n/a

## Indicator 2 – Primary care quality

<b>Indicator name</b>	<b>Primary care quality</b>
<b>Indicator definition</b>	Primary care quality is a score between 0 and 100. It is defined as a weighted average clinical process quality score in terms of population achievement for 16 indicators in the national Quality Outcomes Framework (QOF) (see <b>Appendix 2</b> )
<b>Domain</b>	Quality
<b>Rationale for indicator</b>	Primary care services are a key setting for treating and managing conditions for which hospitalisation and death are amenable to health and social care intervention. Increasing primary care quality is therefore central to health and social care systems adopting a more preventative and equitable approach
<b>Reason for exclusion</b>	Scottish QOF data (now discontinued) could not be stratified by SIMD deprivation category
<b>Indicator type</b>	Weighted average composite score
<b>Measure</b>	Composite score based on QOF population achievement on weighted clinical indicators
<b>Year type</b>	Financial
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	None applied to this indicator
<b>Disclosure control</b>	None applied to this indicator
<b>Numerator definition</b>	Number of patients for whom the indicator was met
<b>Data source</b>	ISD – QOF
<b>Minimum geography</b>	Practice-attributed deprivation quintile
<b>Age bands</b>	n/a
<b>Gender</b>	n/a

<b>Indicator name</b>	<b>Primary care quality</b>
<b>Years</b>	n/a
<b>ICD-10 codes</b>	n/a
<b>Denominator definition</b>	Number of patients diagnosed with the relevant condition
<b>Data source</b>	ISD – QOF
<b>Minimum geography</b>	Practice-attributed deprivation quintile
<b>Age bands</b>	n/a
<b>Gender</b>	n/a
<b>Years</b>	n/a
<b>ICD-10 codes</b>	n/a

### Indicator 3 – Inpatient hospital waiting time

<b>Indicator name</b>	<b>Inpatient hospital waiting time</b>
<b>Indicator definition</b>	Inpatient hospital waiting time is defined as the mean number of days waited by the patient from agreeing treatment with the hospital to treatment for inpatient or day-case treatment, adjusted for specialty mix
<b>Domain</b>	Access
<b>Rationale for indicator</b>	Inpatient hospital waiting time is a key performance measure for most health and social care systems. Reducing inpatient hospital waiting time is an indicator of access to health and social care systems
<b>Reason for exclusion</b>	Inpatient hospital waiting time data collection is driven to a greater extent than other indicators by national target setting. As a result consistent data were only available from 2013/14, meaning that sufficient time trend data could not be produced for this indicator
<b>Indicator type</b>	Specialty-adjusted mean
<b>Measure</b>	Mean number of days waited by patient from agreeing treatment with the hospital to treatment for inpatient or day-case treatment
<b>Year type</b>	Financial
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Not possible
<b>Disclosure control</b>	None applied to this indicator
<b>Numerator definition</b>	Summed number of days waited from outpatient referral to inpatient admission (< 12 months) per year
<b>Data source</b>	ISD – Waiting Times (Treatment Time Guarantee)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	n/a

<b>Indicator name</b>	<b>Inpatient hospital waiting time</b>
<b>Gender</b>	n/a
<b>Years</b>	2013/14–2016/17
<b>ICD-10 codes</b>	n/a
<b>Denominator definition</b>	Number of persons hospitalised per year
<b>Data source</b>	ISD – Waiting Times (Treatment Time Guarantee)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	n/a
<b>Gender</b>	n/a
<b>Years</b>	2013/14– 2016/17
<b>ICD-10 codes</b>	n/a

## Indicator 4 – Preventable emergency hospitalisation for a chronic condition

<b>Indicator name</b>	<b>Preventable emergency hospitalisation for a chronic condition</b>
<b>Indicator definition</b>	The number of patients having one or more emergency hospitalisations for a chronic ambulatory care-sensitive condition, directly age–sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013)
<b>Domain</b>	Access and quality
<b>Rationale for indicator</b>	Chronic ambulatory care-sensitive conditions are chronic conditions for which emergency hospital admission could be prevented by timely and effective provision of other health and social care services. Reducing this type of hospital admission is an indicator of both access and quality for health and social care systems
<b>Indicator type</b>	Directly age- and sex-adjusted rate
<b>Measure</b>	European age–sex standardised rate (EASR) per 100,000
<b>Year type</b>	Financial
<b>Trends from</b>	2002/3–2014/15
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	For publication, affected geographies' individual entries < 5 are suppressed
<b>Numerator definition</b>	Number of people with emergency hospital admissions (both finished and unfinished admission episodes, excluding transfers) for specific long-term

<b>Indicator name</b>	<b>Preventable emergency hospitalisation for a chronic condition</b>
	conditions which should not normally require hospitalisation
<b>Data source</b>	ISD – Inpatient and Day Case Activity (SMR01)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 90+ years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	See <b>Appendix 3</b>
<b>Denominator definition</b>	Estimated number of people alive at mid-point in the current calendar year (30 June)
<b>Data source</b>	NRS mid-year population estimates
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 90+ years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a

## Indicator 5 – Repeat emergency hospitalisation in the same year

<b>Indicator name</b>	<b>Repeat emergency hospitalisation in the same year</b>
<b>Indicator definition</b>	The number of patients having one or more acute inpatient hospital admission in a given year, who have one or more subsequent any-cause emergency readmission in the same year, directly age–sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013)
<b>Domain</b>	Quality
<b>Rationale for indicator</b>	Reducing repeat emergency hospitalisation of patients is an indicator of quality for health and social care systems
<b>Indicator type</b>	Directly age- and sex-adjusted rate
<b>Measure</b>	European age–sex standardised rate per 100,000 (EASR)
<b>Year type</b>	Financial
<b>Trends from</b>	2002/3–2014/15
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	For publication, affected geographies' individual entries < 5 are suppressed
<b>Numerator definition</b>	Number of people with one or more repeat emergency hospitalisations from any cause in the indicator year
<b>Data source</b>	ISD – Inpatient and Day Case Activity (SMR01)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 90+ years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a

<b>Indicator name</b>	<b>Repeat emergency hospitalisation in the same year</b>
<b>Denominator definition</b>	Number of people with an inpatient admission from any cause in the indicator year
<b>Data source</b>	ISD – Inpatient and Day Case Activity (Scottish Morbidity Record 01)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 90+ years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a

## Indicator 6 – Dying in hospital

<b>Indicator name</b>	<b>Dying in hospital</b>
<b>Indicator definition</b>	Dying in hospital is defined as the percentage of deaths from all causes that occurred in hospital in a given year
<b>Domain</b>	Quality
<b>Rationale for indicator</b>	Lower levels of patients dying in hospital is intended to act as a measure of end-of-life planning. A lower percentage of deaths occurring in hospital in a given year is an indicator of quality for health and social care systems
<b>Indicator type</b>	Percentage
<b>Measure</b>	Percentage of deaths from all causes that occurred in hospital in a given year
<b>Year type</b>	Financial
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	For publication, affected geographies' individual entries < 5 are suppressed
<b>Numerator definition</b>	Number of deaths from any cause that occurred in hospital in a given year
<b>Data source</b>	ISD/National Records of Scotland (NRS)
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	n/a
<b>Gender</b>	n/a
<b>Years</b>	2002/3–2014/15
<b>ICD-10 codes</b>	n/a

<b>Indicator name</b>	<b>Dying in hospital</b>
<b>Denominator definition</b>	Number of deaths from any cause in a given year, irrespective of the place of death
<b>Data source</b>	ISD/NRS
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	n/a
<b>Gender</b>	n/a
<b>Years</b>	2002/3–2014/15
<b>ICD-10 codes</b>	n/a

## Indicator 7 – Mortality amenable to health care

<b>Indicator name</b>	<b>Mortality amenable to health care</b>
<b>Indicator definition</b>	The number of deaths (aged < 75 years) from causes considered amenable to health care, directly age–sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013)
<b>Domain</b>	Outcome
<b>Rationale for indicator</b>	Amenable deaths are part of a wider classification of ‘avoidable deaths’, which also include ‘preventable deaths’. The Office for National Statistics (ONS) defines amenable mortality as ‘all or most deaths from that cause (subject to age limits if appropriate) could be avoided through good quality healthcare’. <sup>1</sup> This classification therefore does not include ‘preventable deaths’, which are defined as those that could be avoided by non-health care public health interventions. Reduced health care amenable deaths are an indicator of improved outcomes for health and social care services
<b>Indicator type</b>	Directly age- and sex-adjusted rate
<b>Measure</b>	European age–sex standardised rate (EASR) per 100,000
<b>Year type</b>	Financial
<b>Trends from</b>	2002/3–2014/15
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	For publication, affected geographies' individual entries < 5 are suppressed

<b>Indicator name</b>	<b>Mortality amenable to health care</b>
<b>Numerator definition</b>	Number of people (aged < 75 years) who died as a result of a cause of death considered amenable to health care
<b>Data source</b>	NRS deaths register
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five year age bands from 0–4 to 70–74 years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	See Appendix 4
<b>Denominator definition</b>	Estimated number of people (aged < 75 years) alive at mid-point in the current calendar year (30 June)
<b>Data source</b>	NRS mid-year population estimates
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 70–74 years
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a

## Indicator 8 – All-cause premature mortality

<b>Indicator name</b>	<b>All-cause premature mortality</b>
<b>Indicator definition</b>	The number of deaths (all cause, aged < 75 years), directly age–sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013)
<b>Domain</b>	Outcome
<b>Rationale for indicator</b>	Reducing premature mortality is a national outcome for health and social care partnerships in Scotland. Change in this indicator over time may partly reflect change in health and social care delivery, but will also reflect change in the wider determinants of health. Reducing all-cause premature mortality is an indicator of improved outcomes for health and social care services
<b>Indicator type</b>	Directly age- and sex-adjusted rate
<b>Measure</b>	European age–sex standardised rate (EASR) per 100,000
<b>Year type</b>	Financial
<b>Trends from</b>	2002/3–2014/15
<b>Geographies for presentation</b>	Council area, NHS Board, Scotland – all by SIMD 2004 quintile (population weighted for each geography)
<b>Aggregation of years</b>	Three-year rolling average
<b>Disclosure control</b>	For publication, affected geographies' individual entries < 5 are suppressed
<b>Numerator definition</b>	Number of deaths from any cause that occurred in a given year
<b>Data source</b>	NRS deaths register
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 70–74 years

<b>Indicator name</b>	<b>All-cause premature mortality</b>
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a
<b>Denominator definition</b>	Estimated number of people alive at mid-point in the current calendar year (30 June)
<b>Data source</b>	NRS mid-year population estimates
<b>Minimum geography</b>	2001 data zone
<b>Age bands</b>	Five-year age bands from 0–4 to 70–74
<b>Gender</b>	Male and female
<b>ICD-10 codes</b>	n/a

## Appendix 1: Primary care weighting

<b>Age group (years)</b>	<b>Females: % change in workload relative to 45–49 age group</b>	<b>Males: % change in workload relative to 45–49 age group</b>
0–4	0.9946	0.9974
5–9	0.9921	0.9932
10–14	0.9928	0.9935
15–19	0.9968	0.9941
20–24	0.9988	0.9945
25–29	0.9986	0.9947
30–34	0.9988	0.9956
35–39	0.9989	0.9965
40–44	0.9993	0.9982
45–49	1	1
50–54	1.001	1.0028
55–59	1.0025	1.0065
60–64	1.0044	1.0113
65–69	1.0065	1.0162
70–74	1.0097	1.0201
75–79	1.0125	1.0246
80–84	1.0134	1.0260
85+	1.0134	1.0263

<b>SIMD quintiles</b>	<b>% change in workload relative to the reference category</b>
1 (Most deprived)	1.070
2	1.048
3	1.000
4	0.984
5 (Least deprived)	0.941

## Appendix 2: Quality Outcome Framework indicators

QOF indicator	Summary description of indicator
DM18	Diabetes: influenza vaccination
CHD12	CHD: influenza vaccination
BP5a	Hypertension: BP $\leq$ 150/90 mmHg
CHD10a	CHD: beta-blocker treatment
STROKE10	Stroke/TIA: influenza vaccination
DM23a	Diabetes: HbA1c $\leq$ 7.0%
COPD8	COPD: influenza vaccination
CHD9a	CHD: aspirin or other antithrombotic therapy
CHD8a	CHD: cholesterol $\leq$ 5.0 mmol/l
STROKE12a	Stroke (non-haemorrhagic): aspirin or other antithrombotic therapy
DM12	Diabetes: BP $\leq$ 145/85 mmHg
CHD6a	CHD: BP $\leq$ 150/90 mmHg
SMOKING4	CHD, stroke/TIA, hypertension, DM, CKD, COPD, asthma, psychosis: smoking cessation advice
DM25	Diabetes: HbA1c $\leq$ 9.0%
DM15a	Diabetes with proteinuria or microalbuminuria: ACEI or ARB therapy
CHD11a	CHD (myocardial infarction): ACEI or ARB therapy

ACEI, angiotensin-converting enzyme inhibitor; ARB, angiotensin receptor blocker; BP, blood pressure; CHD, chronic heart disease; CKD, chronic kidney disease; COPD, chronic obstructive pulmonary disease; DM, diabetes mellitus; SD, standard deviation; TIA, transient ischaemic attack.

Source: Ashworth, M et al (2013)<sup>3</sup>

## Appendix 3: Primary ICD-10 codes for chronic ambulatory care-sensitive conditions

ICD code	Descriptor
<b>Infections</b>	
B18.1	Chronic viral hepatitis B, without delta-agent
B18.0	Chronic viral hepatitis B, with delta-agent
<b>Nutritional, endocrine and metabolic</b>	
E10	Insulin-dependent diabetes mellitus
E11	Non-insulin-dependent diabetes mellitus
E12	Malnutrition-related diabetes mellitus
E13	Other specified diabetes mellitus
E14	Unspecified diabetes mellitus
<b>Diseases of the blood</b>	
D50.1	Sideropenic dysphagia
D50.8	Other iron-deficiency anaemias
D50.9	Iron-deficiency anaemia, unspecified
D51	Vitamin B12-deficiency anaemia
D52	Folate-deficiency anaemia
<b>Mental and behavioural disorders</b>	
F00	Dementia in Alzheimer's disease
F01	Vascular dementia
F02	Dementia in other diseases classified elsewhere
F03	Unspecified dementia
<b>Neurological disorders</b>	
G40	Epilepsy
G41	Status epilepticus
<b>Cardiovascular diseases</b>	
I10X	Essential (primary) hypertension

<b>ICD code</b>	<b>Descriptor</b>
I11.0	Hypertensive heart disease with (congestive) heart failure
I11.9	Hypertensive heart disease without (congestive) heart failure
I13.0	Hypertensive heart and renal disease with (congestive) heart failure
I20	Angina pectoris
I25	Chronic ischaemic heart disease
I50	Heart failure
I48X	Atrial fibrillation and flutter
J81X	Pulmonary oedema
<b>Respiratory diseases</b>	
J20	Acute bronchitis
J41	Simple and mucopurulent chronic bronchitis
J42X	Unspecified chronic bronchitis
J43	Emphysema
J44	Other chronic obstructive pulmonary disease
J45	Asthma
J46X	Status asthmaticus
J47X	Bronchiectasis

Source: reproduced from Cookson et al (2016)<sup>4</sup>

## Appendix 4: ONS list of causes of death considered amenable to health care

Condition group and cause	ICD-10 codes	Age (years)
<b>Infections</b>		
Intestinal infectious diseases	A00–A09	0–14
Tuberculosis	A15–A19, B90	0–74
Selected invasive bacterial and protozoal infections	A38–A41, A46, A48.1, B50–B54, G00, G03, J02, L03	0–74
Hepatitis C	B17.1, B18.2	0–74
Pertussis (whooping cough)	A37	0–14
Measles	B05	1–14
Other infections (diphtheria, tetanus, poliomyelitis and varicella)	A35, A36, A80, B01	0–74
HIV/AIDS	B20–B24	All
<b>Neoplasms</b>		
Malignant neoplasm of colon and rectum	C18–C21	0–74
Malignant melanoma of skin	C43	0–74
Malignant neoplasm of breast	C50	0–74
Malignant neoplasm of cervix uteri	C53	0–74
Malignant neoplasm of bladder	C67	0–74
Malignant neoplasm of thyroid gland	C73	0–74
Hodgkin's disease	C81	0–74
Leukaemia	C91, C92.0	0–44
Malignant neoplasm of testis	C62	0–74
Malignant neoplasm of unspecified parts of uterus and body of uterus	C54–C55	0–44
Benign neoplasms	D10–D36	0–74
<b>Nutritional, endocrine and metabolic</b>		
Diseases of the thyroid	E00–E07	0–74
Diabetes mellitus	E10–E14	0–74
Addison's disease	E27.1	0–74

Condition group and cause	ICD-10 codes	Age (years)
<b>Neurological disorders</b>		
Epilepsy and status epilepticus	G40–G41	0–74
<b>Cardiovascular diseases</b>		
Rheumatic and other valvular heart disease	I01–I09	0–74
Hypertensive diseases	I10–I15	0–74
Ischaemic heart disease	I20–I25	0–74
Cerebrovascular diseases	I60–I69	0–74
<b>Respiratory diseases<sup>0</sup></b>		
Influenza (including swine flu)	J09–J11	0–74
Pneumonia	J12–J18	0–74
Chronic obstructive pulmonary disorder	J40–J44	0–74
Asthma	J45–J46	0–74
Selected respiratory diseases	J00–J06, J20–J22, J30–J39	1–14
<b>Digestive disorders</b>		
Gastric and duodenal ulcer	K25–K28	0–74
Acute abdomen, appendicitis, intestinal obstruction, cholecystitis/lithiasis, pancreatitis, hernia	K35–K38, K40–K46, K80–K83, K85, K86.1–K86.9, K91.5	0–74
<b>Genitourinary disorders</b>		
Nephritis and nephrosis	N00–N07, N17–N19, N25–N27	0–74
Obstructive uropathy and prostatic hyperplasia	N13, N20–N21, N35, N40, N99.1	0–74
<b>Maternal and infant</b>		
Complications of perinatal period	P00–P96, A33	All
Congenital malformations of the circulatory system	Q20–Q28	0–74
<b>Intentional injuries</b>		
Misadventures to patients during surgical and medical care	Y60–Y69, Y83–Y84	All
